John Dalton was an English chemist, meteorologist and physicist. In 1803, John Dalton Proposed an "atomic theory". Five main points of Dalton's atomic theory: Elements are made of extremely small particles called atoms.

Atomic Structure Timeline - Periodic table

This law states, "the properties of the elements are periodic functions of atomic number." The periodic table is a chart that categorizes elements by "groups" and "periods." All elements are ordered by their atomic number. The atomic number is the number of protons per atom. In a neutral atom, the number of electrons equals the number of protons.
