The Pearson correlation model is by far the most prominent in finance. It is applied in risk measures such as VaR (value-at-risk), see Chapters 1, 10 and 12; ES (expected shortfall), see Chapter 16; ERM (enterprise risk management); and EVT (extreme value theory).

The Pearson Correlation Model - Work of the Devil? - Risk.net

Because traditional risk management tools do not account for the interdependency of the risk factors, traditional measures of overall price risk may be inaccurate for portfolios that contain correlation products. The market for correlation products represents a growing portion of the overall market for securities that trade over the counter.
