Getting the books **heavy and extra heavy oil upgrading technologies** now is not type of challenging means. You could not solitary going in the same way as ebook accrual or library or borrowing from your contacts to right of entry them. This is an unquestionably simple means to specifically get guide by on-line. This online pronouncement heavy and extra heavy oil upgrading technologies can be one of the options to accompany you in the manner of having other time.

It will not waste your time. bow to me, the e-book will utterly spread you other matter to read. Just invest tiny grow old to retrieve this on-line pronouncement **heavy and extra heavy oil upgrading technologies** as skillfully as evaluation them wherever you are now.

Besides being able to read most types of ebook files, you can also use this app to get free Kindle books from the Amazon store.

### Heavy And Extra Heavy Oil

Heavy crude oil (or extra heavy crude oil) is highly-viscous oil that cannot easily flow to production wells under normal reservoir conditions. It is referred to as "heavy" because its density or specific gravity is higher than that of light crude oil. Heavy crude oil has been defined as any liquid petroleum with an API gravity less than 20°.

## **Heavy and Extra-heavy Oil Upgrading Technologies - 1st Edition**

Heavy oil is defined as petroleum which has a density equal or lower than 20 API, but if petroleum has 10 API or less it is considered as extra heavy oil or bitumen, which is denser than water. The difference between bitumen and extra heavy oil is ambiguous and usually refers to the production technology, so we will include both under the term extra-heavy oil.

Light oil is characterized by an API gravity of at least 22°, and extra-heavy oil has an API gravity of less than 10°. Natural bitumen, also known as oil sands, shares the characteristics of heavy...

- Extra-heavy oil: a major segment of Total's growth strategy
- Strong R&D commitment to increase recovery, to mitigate costs, to improve energy efficiency, to reduce GHG emissions,

## **EXTRA HEAVY OILS IN THE WORLD ENERGY SUPPLY**

Natural bitumen and extra-heavy oil are the remnants of very large volumes of conventional oils that have been generated and degraded, principally by bacterial action. Chemically and texturally, bitumen and extra-heavy oil resemble the residuum generated by refinery distillation of light oil.

Recent studies estimate that unconventional oil reserves, including heavy oils, extra-heavy oils and bitumen exceed 6 trillion barrels. This amount is equivalent to about 70% of all energy resources derived from fossil fuels in the world (Oilfield Review Summer, 2006).

The properties of heavy and extra-heavy petroleum are comparable to those of the vacuum (565°C+ VR) and atmospheric (345°C+ AR) residua. Heavy petroleum is constituted by heavy hydrocarbons, and several metals (Riazi, 2005). Typical amounts of impurities of different

Heavy and extra-heavy crude oil separation\* Traditional measurement technologies present limitations in the separation of heavy and extra heavy crude oil, not only due to their inability to provide complete process data. The need to install these technologies within the separator renders them vulnerable to contamination.

Compared with light oil, heavy oil is more costly to produce, process, and transport. In many cases, extra heavy oil must be chemically upgraded to lower density. In the Venezuelan Orinoco heavy oil belt, for example, about 1 bbl of diluent is required for every 3 or 4 bbl of extra-heavy oil.

### **The Challenges of Processing and Transporting Heavy Crude**

Márquez and Brito present three variables to guide the selection of a suitable desander for heavy and extra heavy oil: particle size, sand concentration, and liquid properties (viscosity and density). To facilitate the transportation of the Orinoco Belt extra heavy oil, it is diluted to reduce the viscosity and increase the density.

Abstract: The transportation of heavy and extra-heavy crude oils from the head-well to the refinery is of significant economical, technical and scientific concern since the production of such crude oils is rising over the world in the last years. In this paper, the current technological solutions to move the crude oils from the production site to the processing facilities are discussed through the analysis of recent and first innovative patents on the field.
