### Paper For Benaroya Asteroid Mining

Robust technical and economic approaches to evaluation of the feasibility of proposed projects are necessary for assessment of such space mining ventures. This paper discusses the technical engineering and mission-planning choices and shows how the concept of probabilistic Net Present Value can be used to optimize these choices, and hence select between alternative asteroid mining mission designs.

Asteroid mining shows promise as a method for obtaining critical elements. The asteroid belt in our solar system contains ~8% metal-rich (M type) asteroids and 75% volatile-rich carbonaceous (C type) asteroids ("Asteroid belt", 2010). The denser metals in asteroids, including platinum group minerals and REE's, are distributed relatively evenly ...
